Project Check-in

Due May 13

The project check-in is a milestone to ensure that groups are making meaningful progress toward their final deliverables. Each group will visit office hours for a meeting with the instructor to discuss feedback on their proposal and demonstrate what they have built so far.

What to prepare:

- A working **minimum viable product (MVP)**: a prototype or proof-of-concept that demonstrates the core functionality of your project. This does not need to be polished, but it should be functional enough to show that you are on track.
- Be ready to discuss how you have addressed any feedback received on your proposal.
- Come with questions or concerns about the direction of your project. This is a chance to get help and course-correct if needed.

The check-in is meant to be a supportive conversation, not an exam. But we expect to see real progress. Groups that are struggling should come to office hours early and often. Please do not wait for the check-in to ask for help.

Specification for Satisfactory (S)

To receive a Satisfactory grade on the project check-in, a group must meet **all** of the following criteria:

1. The group attended the scheduled check-in meeting during office hours.
2. The group demonstrated a functional MVP or showed meaningful progress toward one (e.g., working code, preliminary visualizations, a live prototype).
3. The group showed evidence of addressing feedback received on their proposal.

A grade of Unsatisfactory (U) will be given if the group does not attend the check-in or has made no meaningful progress. A grade of Needs Revision (N) will be given if the group attended but did not demonstrate sufficient progress or engagement with proposal feedback; the group may revise by scheduling a follow-up meeting within one week.
